

AMENDMENTS TO THE CLAIMS

Listing of Claims:

1. (Previously presented) A method of processing information with a system provided with a plurality of processing devices coupled to a network, the method comprising:

receiving a definition of a job for processing information from a user of the system;

automatically checking whether all processing devices belonging to a predetermined set selected from the plurality of processing devices are suitable for performing the job;

presenting an indication for each processing device of the set, to the user via presentation means, of whether the same is suitable for performing the job;

if a processing device is not suitable for performing the job, then a reason for this is indicated via the presentation means;

after that, receiving a selection of a processing device belonging to the set, wherein a processing device not suitable for the job is selectable to become said selection; and

transmitting at least a part of the job to the selected processing device.

2. (Previously Presented) The method according to claim 1, wherein the plurality of processing devices are printing devices.

3. (Canceled)

4. (Previously Presented) The method according to claim 1, wherein the indication of a reason that a processing device is not suitable for performing the job is made in response to said processing device having been selected by the user.
5. (Original) The method according to claim 1, wherein a part of the defined job is presented to the user.
6. (Original) The method according to claim 5, wherein said part of the job comprises a setting of the job.
7. (Original) The method according to claim 5, wherein said part of the job is presented to the user simultaneously with said indication the processing devices of the set via the presentation means.
8. (Original) The method according to claim 1, wherein the selected processing device is indicated on the presentation means
9. (Original) The method according to claim 8, wherein after a confirmation of a selection of a processing device, the job is passed to the selected processing device.
10. (Previously Presented) The method according to claim 9, wherein the confirmation of the selection is received from the user of the system.

11. (Original) The method according to claim 1, wherein a prediction as to what will be the selected processing device is predicted by the system on the basis of a predetermined criterion, after which the a change from the predicted selection can be received from the user.

12. (Original) The method according to claim 11, wherein the criterion is a processing property of the processing device.

13. (Original) The method according to claim 11, wherein the criterion is a distance between the user and the processing device.

14. (Original) The method according to claim 11, wherein the criterion is availability of the processing device.

15. (Previously Presented) The method according to claim 11, wherein the criterion is processing cost.

16. (Original) The method according to claim 11, wherein the criterion is a previously indicated personal preference of the user.

17. (Original) The method according to claim 1, further comprising indicating via the presentation means separately whether at least one processing device belonging to the set is suitable for performing the job.

18. (Previously Presented) A method of processing information with a system comprising one processing device and presentation means, the method comprising:

receiving a definition of a job for processing information from a user of the system;

automatically checking whether the processing device is suitable for performing the job;

and

indicating, if the processing device is not suitable for performing the job, a reason why the processing device is not suitable for performing the job via the presentation means.

19. (Original) The method according to claim 18, wherein the reason is indicated if the processing device is allocated by a user of the system.

20. (Original) The method according to claim 18, wherein the processing device is a printing device.

21. (Previously Presented) A system for processing information, the system comprising:

a network to which are coupled the following;

a plurality of processing devices;

defining means for defining a job for processing information;

research means for checking whether all processing devices belonging to a predetermined set selected from the plurality of processing devices are suitable for performing the defined job;

presentation means for presenting an indication, for each processing device of the set, of whether the same is suitable for performing the defined job, and if a processing device is not suitable for performing the job, indicating why said processing device is not suitable; and

selection means for selecting a processing device from the set based on the indication.

22. (Original) The system according to claim 21, further comprising first indicating means to indicate, in the event that the research means has determined that a displayed processing device is not suitable for performing the job, why said processing device is not suitable for performing the job.

23. (Canceled)

24. (Original) The system according to claim 22, further comprising allocating means for allocating a processing device, said allocating means being connected to the display means in such manner that in response to the allocation of the processing device the indicating means indicate why this processing device is not suitable.

25. (Original) The system according to claim 24, wherein the allocation means are controllable by a user of the system.

26. (Original) The system according to claim 21, further comprising means for displaying a part of the job.

27. (Original) The system according to claim 26, wherein said part comprises a setting of the job.

28. (Original) The system according to claim 26, wherein the means for displaying a part of the job is connected to the presentation means for presenting the said part to the user via the said presentation means.

29. (Original) The system according to claim 26, wherein the presentation means is adapted to present the said part of the job and the set of processing devices simultaneously.

30. (Original) The system according to claim 21, wherein the selection means are adapted to make a selection for a processing device on the basis of a predetermined criterion.

31. (Original) The system according to claim 30, wherein the criterion is selected from the group consisting of processing properties of the processing device, a distance between a user and the processing device, availability of the processing device, printing costs and a personal preference of the user.

32. (Original) The system according to claim 30, further comprising means with which a user of the system can change the selection.

33. (Original) The system according to claim 21, further comprising confirmation means connected to transmission means so that after confirmation of a selection of a processing device the job is transmitted to said processing device.

34. (Original) The system according to claim 21, further comprising second indicating means to indicate whether at least one processing device belonging to the set is suitable for performing the job.

35. (Previously Presented) A system for processing information, the system comprising:

a processing device;

defining means for defining a job for processing information;

research means for checking whether the processing device is suitable for performing the defined job; and

indicating means to indicate a reason, in the event that the research means show that the processing device is not suitable for performing the job, why said processing device is not suitable for performing the job.

36. (Original) The system according to claim 35, further comprising allocation means for allocating the processing device in such manner that the indicating means indicate why the

processing device is not suitable if the same has been allocated by means of the allocation means.

37. (Original) The system according to claim 35, wherein the processing device is a printing device.

38. (Previously Presented) A computer program element comprising computer program code means for causing a processor to perform the method according to claim 1.

39. (Previously Presented) A computer program element comprising computer program code means for causing a processor to perform the method according to claim 18.

40. (New) The method according to claim 18, wherein the processing device not suitable for performing the defined job becomes selectable by the user to perform the defined job, after the indicating step.

41. (New) The system according to claim 21, wherein the processing device not suitable for performing the defined job becomes selectable by a user to perform the defined job, after the presentation means indicates why said processing device is not suitable for performing the defined job.

42. (New) The system according to claim 35, wherein the processing device not suitable for the defined job becomes selectable by a user to perform the defined job, after the indicating means indicates why said processing device is not suitable for performing the defined job.
